## **HABITATIONAL APPLICATION**

**Confirm that the residential facility meets NFPA Life Safety requirements regarding emergency lighting, secondary means of egress and smoke detectors.**

- If the risk is 3 stories or less and 16 units or less, we can accept battery operated smoke detectors along with the requirement for secondary means of egress.
  
- For habitational exposure with more than 16 dwelling units or 4 or more stories, a central station fire alarm system or automatic sprinkler system is required. The alarm must include hardwired heat detectors in the living units in addition to hard wired smoke detectors required in the sleeping areas.
  
- There must be 2 means of egress if a building is more than two stories.
  
- Common hallways smoke detectors must be hard wired if greater than 3 stories or is more than 10 residential units.
